

EXPLORING in TURKEY

Pasinex Resources Limited is a public company listed on the Canadian National Stock Exchange, established by the reverse takeover of Triple Dragon Resources Inc (CNSX: TDN). Pasinex is exploring for base and precious metal opportunities in Turkey, seeking to acquire property through purchase and joint venture agreements. Because of its metallurgical expertise, Pasinex is particularly interested in partnering with companies that have already discovered metallurgically complex deposits. Pasinex has its exploration headquarters in Ankara, Turkey, and has a team actively reviewing opportunities and generating targets in the country. Field evaluation of target areas began in October 2011.

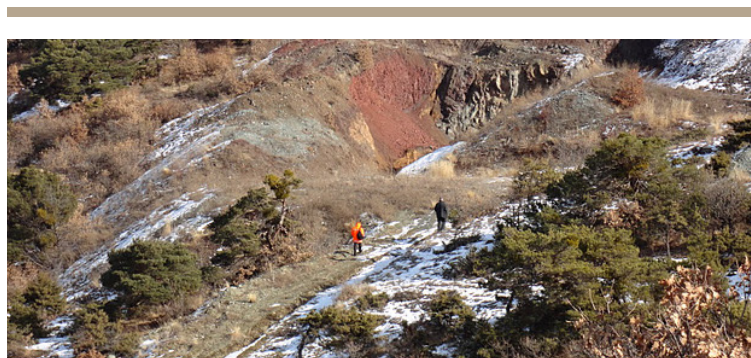

After eighteen months of international review, Pasinex chose Turkey as its exploration focus because of the country's vibrant and growing mining industry, supported by its very prospective geology.

Until the last decade, Turkey's modern mining infrastructure was developed primarily by its globally-dominant borax mines, as well as by its chromite and coal mines. In the last 10 years, however, the country has been shown to host significant deposits of precious and base metals, and the rate of discovery continues to be high. Large companies already operating in Turkey include Teck Resources (TSX: TCK.B), Eldorado Gold Corp (TSX: ELD), Inmet Mining Corporation (TSX: IMN) and Koza Gold Corporation (IBSE: KOZAL), a Turkish company with four producing gold mines. In addition, approximately twenty five junior exploration companies are active in the country.

Turkey's recently-revised mining code provides an additional incentive to exploration in Turkey, in that it now forces mineral title holders to relinquish ground they are not actively exploring or mining. Consequently, many thousands of mineral titles, never explored with modern technology, have recently been relinquished and are currently being auctioned by the Mining Ministry. Pasinex is actively participating in this auction process, with a view to bringing its exploration expertise to bear on the most prospective and under-explored properties it can identify.

ABOUT TURKEY

Turkey is a rapidly-growing economy of 74 million people. The government is a stable, secular democracy which is pro-business. The country has a well-trained workforce, well-developed infrastructure and sophisticated financial and legal systems. Turkey has a long and continuous heritage of mining dating back to ancient civilizations. Its large Geological Survey was established by President Ataturk in 1935, and provides considerable resources supportive of exploration companies.

PASINEX MANAGEMENT

Steve Williams **President and CEO**

Steve Williams is the President and CEO of Pasinex Resources Limited. Mr. Williams graduated with a Bachelor of Applied Science (Extractive Metallurgy) from the Western Australian School of Mines and an MBA from Tulane University. He has worked in the mining industry since 1976 in milling operations in Australia and Canada. He worked 20 years with SGS Lakefield Research in Canada and Chile in both metallurgical project management and business management, finally becoming Managing Director for SGS Canada, a company with about 1300 employees in Canada. Steve has authored many technical papers and in 2004 he became a CIM Distinguished Lecturer and in 2008 a CIM Fellow, for his work in geometallurgy.

Clinton Smyth **VP Exploration**

Clinton Smyth P. Geo, is VP Exploration of Pasinex Resources Limited. Mr. Smyth has a MSc. in Geochemistry (Cape Town) and an MSc. in Computer Science (London, UK). He has 35 years of experience in the minerals industry, working in Africa, Asia, Australia, Mexico and Canada. From 1975 to 2000 he worked for the Anglo American Corporation in minerals exploration, resource evaluation and mining. He served as VP Exploration in Australasia, and as VP Exploration in Africa. He led the team which discovered the Buzwagi gold deposit in Tanzania. He led the group responsible for resource evaluation in Anglo American's New Mining Business Division, responsible for the Navachab and Sadiola gold deposits, as well as for the Skorpion zinc deposit, the Uitkomst nickel deposit, and the Namaqua Sands mineral sands deposit. Subsequently he has served as VP Exploration for Dome Ventures Corporation and Miocene Metals Ltd., and is currently on the board of Dolly Varden Resources Limited.

Baris Yildirim **Manager – Turkey**

Baris G. Yildirim, MSc., is Turkey Manager – Pasinex Resources Limited. Baris Yildirim is a geologist and minerals processing engineer based in Ankara, Turkey and has 8 years of experience in the mining industry. He worked as a geologist for Teck Resources in Turkey where he managed multiple exploration projects. His work at Teck was awarded twice, as "New Discovery" and "Best Work Proposal". As well, Baris worked as a process mineralogist for Teck Metals in Canada, and executed an integrated geometallurgy project between the Highland Valley Copper Mine and the Teck Research Center. Baris has seven technical publications.
